(54) Title: SUBBAND-VIDEO DECODING METHOD AND DEVICE

(57) Abstract: The invention relates to a video decoding method for the decompression of an input coded bitstream corresponding to an original video sequence that had been divided into successive groups of frames (GOFs) and coded by means of a subband video coding method. This decoding method comprises, on the one hand, sub-steps for the reconstruction of said first couple of frames of said current GOF, and, on the other hand, for the reconstruction of said (n-1) other couples of frames of the current GOF, sub-steps of decoding the current subbands by combining a previous sub-sampled portion and the new current sub-bitstream of the coded bitstream according to some specific rules, said decoding method being thus applied in order to reconstruct successively each couple of frames of the current GOF, up to the last one.
